MANAGING DATA

SETTING UP THE 'DATA INFRASTRUCTURE'

- » Data integrity: validity, authenticity and security
- » Data storage: risks and harms
 - » Physical location
 - » Digital location
 - » Ultimate ownership of storage
 - » Back ups

- » Access
- » Data lifecycle
- » Saving data

Pros and Cons of Storage Options

Locally on your pc(s)

- » Pro: High security when encrypted, fast, accessible, legal clarity of ownership
- » Con: Lower security of physical theft or confiscation, poor backup (especially in cases of fire or floods)

On your own network

- » Pro: easier sharing, better backup, greater legal clarity
- » Con: increased cost, greater skill needed fr security, greater reliance on IT support, exposure to confiscation

Living in the cloud

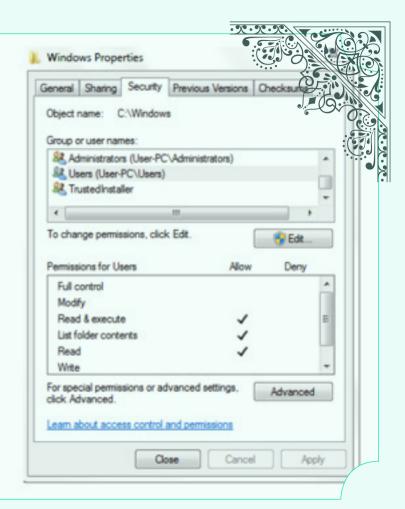

- » Pro: decreased costs, increased resilience, easy sharing, better backup
- » Con: legal uncertainty, no control over physical access, nearly impossible to "vet" people with access to servers, reliant on cloud company

For your eyes only?

- » Limit user access to only the minimum amount of data
- » Only allow access as long as needed
- » Only have the minimum permissions needed to do the job

Legal considerations

- » Data protection laws
- » Encryption technology laws
- » Jurisdictional issues
- » Copyright and Patent
